So help me “set up SSMS or Access ODBC connection and tap into it”.

Regards

Andy, the view I told you about earlier is called 'GISDWSystemsAssessmentFlex_Harvey' (see below). So you or your data management people can use Access to pull data from it rather than pulling directly from a table. Our data team can write any other views that would be helpful – they are especially useful for pulling the data such as that collected by the surveys - - what we call the Question/Answer data -- that power the dynamic forms as opposed to the static forms like the Facility details where the data just resides in a Facilities table.

Kenneth, we have some database views that are synced down to computers that he can tap into. There is one called 'GISDWSystemsAssessmentFlex_Harvey' that joins to a max(assessmentDate) to get the latest assessment data. We can set up SSMS or Access ODBC connection and tap into it.
